Installation Script for Vane

Executing the Vane Set up Script:

Downloading the script from public repository:

```
Unset
curl -O
https://raw.githubusercontent.com/aristanetworks/vane/nrfu/install_vane.sh
```

Give execution rights

```
Unset
chmod +x install_vane.sh
```

Execute the script

```
Unset
./install_vane.sh path_to_destination_folder(optional)
```

Once the script completes, given you have pre-installed the dependencies to set up the environment (git, poetry, correct version of python) you will be in a python virtual environment ready to execute Vane!

Note: To exit out of the virtual environment enter "deactivate" and to further exit out of bash in MacOS, enter "exit"
